Skills

- **Languages** — JavaScript, TypeScript, HTML, CSS
- **Frontend** — React.js, Next.js (App Router, SSR/SSG), Vue.js, Angular.js, Tailwind CSS, Material UI, PrimeVue, Three.js, Storybook
- **Performance** — Web Vitals (LCP/CLS/INP), Lighthouse, Mux, code-splitting, lazy loading
- **TV Platforms** — Tizen OS (Samsung), webOS (LG), remote-key navigation, OTA
- **Backend & Data** — Node.js, Express.js, MongoDB, REST, GraphQL
- **Testing, CI, AI** — Jest, Vitest, Playwright, Cypress (cypress-split), GitHub Actions, AWS Amplify, Vercel, Claude, Amplitude, Google Search Console, DataDog, Statsig

Professional Experience

Software Engineer, *Stage* 09/2025 | Noida

- End-to-end owner of Web, Samsung TV, and LG TV — three production platforms at STAGE.
- Worked on Samsung TV and LG TV apps with no prior Tizen/webOS knowledge; implemented OTA reducing release time from ~2 months to ~2 minutes.
- Drove 2x improvement in subscription rate end-to-end — spotted the opportunity from product metrics, took initiative, and shipped the entire solution solo using fully AI-driven development.
- Owned the full Web funnel stack; improved web-to-app-install trial activated conversion from 27% to 42%.
- Built automated SEO, GEO, and ASO agents with self-improving auto-research capability — replaced manual SEO/GEO work end-to-end and the third-party SEO agency; drove 30+ SEO/GEO PRs.
- Built automated DataDog alert resolution — agents triage alerts, generate fix PRs, and post status updates directly to Slack.
- Authored the AI Coding Playbook (one-script setup any dev or non-dev can run on any STAGE repo or for new project init; auto-loads cross-repo context and a curated library of AI skills) and built the Code Review Council — both team-wide defaults; reduced AI tool costs ~40% via token optimization.
- Migrated CI from Cypress Cloud to cypress-split with parallel sharding — test time 30 min → 8 min (~73% faster), zero paid dependencies.
- Shipped 2 full TV-app stack migrations in 10 days (Next.js → .NET → React) based on hypothesis-driven perf measurement.

Software Engineer, *Liberin Technologies* 06/2023 – 09/2025 | Noida, India

- Migrated a large-scale frontend Vue 2 → Vue 3; built dynamic admin dashboards in Vue 3 + TypeScript + Tailwind, improving usability 30%.
- Developed an AI-powered feature in Next.js auto-generating charts, diagrams, and SQL queries for faster data-driven decisions.
- Built a custom auth library with Keycloak + OAuth2 implementing Role-Based Access Control (RBAC) across services.
- Engineered a Face Recognition system for employee attendance, removing third-party dependencies.
- Led an enterprise-grade Angular application — Reactive Forms, RxJS, route-driven failover workflows; achieved SonarQube Grade

Pass (0 bugs, 0 vulnerabilities).

Software Engineer, *Krishify* 07/2022 – 06/2023 | Gurugram, India

- Contributed to **India's first Agri Chatbot** with speech recognition, developed within 48 hours using Next.js.
- Developed "Krishify Shop," an e-commerce platform with over **10 million users**, leveraging **React.js**, **Redux**, and **Material-UI.**

Projects

Citovo, *(in progress)*

- Automated end-to-end SEO & GEO platform: SEO audits, programmatic SEO, AI-generated blogs, and prompts users can feed into their own AI agents to auto-fix SEO issues.

SWORD, *(in progress · open source)*

- Native desktop GUI for Claude Code with Claude.ai -style UI, markdown + Shiki syntaxhighlighting, multi-chat sidebar, and zero-config auth auto-detecting existing Claude sessions.

Inspex.in, *Next.js + MongoDB + SQLite.*

- Company intelligence platform on Indian companies; SSR SEO pages, Razorpay-integrated, queue-based delivery, AI-driven discovery

Exam Sankalp, *(Next.js + MongoDB + Supabase + Python)*

- Practice platform for Indian (JEE, UPSC, SSC, Banking, Railways) with AI-generated questions, PYQ banks, mock tests, analytics.

Education

Bachelor's of Technology, *Lovely Professional University* Jalandhar, India
